SUMMARY

Cybersecurity graduate (B.Sc. University of Bahrain, 3.97/4.00 GPA) with strong foundations in secure application development and full-stack development. Hands-on experience building scalable web systems, APIs, and real-time applications, with a strong background in problem-solving, system design, and cybersecurity fundamentals. Motivated to work on impactful projects while continuously learning and developing professional expertise.

PROFESSIONAL EXPERIENCE

The Benefit Company

1/7/2026 – 31/8/2026

Information Security Intern

- Gained hands-on exposure to AWS security tools for network traffic analysis and firewall configuration, supporting infrastructure security evaluations.
- Conducting user access reviews across systems, including auditing permissions and removing or deactivating accounts.

Arab Financial Services (AFS)

09/2026 – Present

IT Intern

- Working in the IT department on TIBCO middleware, supporting enterprise application integration and communication between core banking/payment systems.

EDUCATION

Bachelor of Science in Cybersecurity

09/2022 – 08/2026

University of Bahrain

- GPA: 3.97 / 4.00
- Relevant Coursework: Secure Software Development, Data Structures & Algorithms, Network Security, Risk Management, IT Auditing, Penetration Testing, Ethical Hacking, and Ethics.

Full-Stack Development Program

03/2023 – 08/2026

Reboot Coding Institute

Intensive training in full-stack development, systems programming, and algorithms. Built cross-platform web applications, WebSocket-based real-time systems, REST APIs, and AI technologies, with exposure to Linux and operating systems.

TECHNICAL SKILLS

Cloud & DevOps — AWS (Cloud Practitioner certified), Docker, Linux

Programming Languages — Java, Go, Python, Rust, PHP

Frontend — React.js, Next.js, TypeScript, Tailwind CSS, HTML, CSS, JavaScript, AJAX

Backend & APIs — RESTful APIs, Session-based Authentication, WebSockets

Databases — MySQL, SQLite3, SQL queries

Version Control — Git, GitHub

Platforms & IDEs — IntelliJ IDEA, Visual Studio Code

Soft Skills — Communication, teamwork, problem solving, analytical thinking

Languages — Arabic, English

CERTIFICATIONS

AWS Certified Cloud Practitioner — Amazon Web Services

Cybersecurity Fundamentals — IBM (Coursera)

Advanced Cybersecurity Risk Management — Board Infinity (Coursera)

Web Application Security Testing with OWASP ZAP — Coursera

Metasploit for Beginners: Ethical Penetration Testing — Coursera

AWARDS

Benefit Fintech 2026 Award

31/08/2026

The Benefit Company

Awarded for a business case presented to the CEO and employees of Benefit, recognized for high implementation potential.

1st Place — IT/Cybersecurity Department Exhibition

23/06/2026

University of Bahrain

Awarded for OpticNet, an AI-powered full-stack network security platform developed as a senior project.

PROJECT EXPERIENCE

OpticNet — Network Security Intelligence Platform

02/2026 – 05/2026

Python, Flask, Docker, SQLite, Ollama, Nmap, Nuclei, NVD API, Force-Graph, JWT, Pytest

- Built a full-stack security reconnaissance platform integrating Nmap, Nikto, SQLMap, Nuclei, Subfinder, and Gobuster into a unified scanner, with real-time CVE analysis from NIST NVD, and an interactive attack-surface risk graph.
- Architected a 10-container Docker environment with 6 intentionally vulnerable lab targets and a fully offline bilingual AI assistant (EN/AR) using Ollama.
- Implemented zero-knowledge encryption (Argon2id + AES-256) with 426 passing automated tests and attack path simulation mapped to MITRE ATT&CK.

Social Network Platform

Go, Next.js, TypeScript, React, Docker, SQLite

- Designed and implemented a scalable full-stack web application with cross-platform support, deployed using Docker, focusing on security and performance
- Developed a real-time chat system using WebSockets, secure session-based authentication, and database migrations supporting follower systems, groups, and events

Local HTTP Server

Rust, Python CGI, mio

- Validated system reliability through siege stress testing, achieving 99.5% availability, zero memory leaks, and stable 6.7 MB memory usage under up to 5,000 concurrent connections.
- Built a full HTTP/1.1 server from scratch in Rust with CGI support, virtual hosting, session-based auth, file uploads, and multi-server routing.

INTERNATIONAL EXPERIENCE

2026 Chinese Bridge Student Delegation

01/2026

Shanghai University

Shanghai, China

- Selected to represent Bahrain in a cultural & academic exchange program hosted by Shanghai University's College of International Education
- Completed coursework in Mandarin, Chinese calligraphy, paper cutting, and Chinese culture and history
- Achieved HSK Level 1 with a perfect score of 200/200.
